

Problem Statement

1. In recent years, the textile and fashion industries have witnessed an enormous amount of growth in fast fashion.
2. On e-commerce platforms, where numerous choices are available, an efficient recommendation system is required to sort, order, and efficiently convey relevant product content or information to users.
3. Chatbot-based fashion recommendation systems (FRSs) have attracted a huge amount of attention from fast fashion retailers as they provide a personalized shopping experience to consumers. With the technological advancements, this branch of artificial intelligence exhibits a tremendous amount of potential in data processing, parsing, classification, and segmentation.
4. Despite its huge potential, the number of academic articles on this topic is limited.
